

IN THE SPECIFICATION

Presented below are specification changes showing the changes made.

Please amend paragraph [0048] as follows:

[0048] A lower portion of imprint assembly 600 includes gas actuators 660 disposed between first bottom baseplate 607 and second bottom baseplate 667. Lower cross beam 622 is disposed below second bottom baseplate 667. Spring rods 631, 632, 633, and 634 allow first bottom baseplate 607 and second bottom baseplate 667 to compress gas actuator 660. In one embodiment, as gas actuator 660 expands, second bottom baseplate 667 moves downward and away from first bottom baseplate 607, with springs 661, 662, 663, and 664. This expansion causes top cross beam 620 to lower and force upper holder 640 and lower holder 642 together. The gap between press baseplate 606 and first bottom baseplate 607 would be where the upper lower portions of input assembly 600 would be mounted, for example, to table as illustrated in **FIG. 2[[A]]**.
